

CloudShell and TestShell Training and Services

TSI offers training and consulting services for QualiSystems' CloudShell and TestShell products. The consulting services may include support for layer one switches, test equipment, inventory creation, Blueprint creation, and other network centric tasks.

Training is performed onsite and includes training materials and software licenses required for training – up to eight students. Customer is responsible for providing the training location, appropriate hardware, and network infrastructure configuration. Instructor travel expenses are included in all onsite training classes. Pricing includes training setup in advance when required.

Consulting services may be performed onsite or at a remote facility. Consulting pricing does not include travel expenses or facility costs which are billed at cost. An up front expense cost may be negotiated or included with the consulting pricing. Unless a specific statement of work is developed, the consulting deliverable is limited to the actual time spent by TSI on customer tasks as defined and agreed to by the customer and TSI.

Training

TSI - CloudShell/TestShell Administration Training - \$3,500

- One day one on one administration class focusing on CloudShell/TestShell setup, license, and data management
